DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 and 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yasui et al. (5248963) in view of Kaneda (JP 11271715).

Yasui discloses a liquid crystal display device comprising: pixel electrodes; common electrode; a plurality of data lines and gate lines; plurality of switches; and a controller for detecting the power supply of the liquid crystal display device is turned off and outputting signals to a gate line driver to make all the gate lines active for a predetermined time to erase the display device (see abstract).

Yasui does not explicitly disclose detecting an absence of a video signal or a sync signal. Instead, Yasui discloses detecting the absence of the power signal.

Kaneda discloses a liquid crystal display device comprising a controller for detecting an absence of a sync signal and outputting a same potential voltage to a common electrode and data lines.

Thus, it would have been obvious to one ordinary skill in the art to use Kaneda's controller in Yasui's device because of the same reason as Kaneda uses in his

invention, which is to secure the excellent display quality of the display device for a long period of time (see Kaneda's abstract).

Response to Arguments

3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
